

Digital Mammography Self-Assessment Workshop at ECR

As in previous years at ECR Carestream Health will be hosting a Digital Mammography Self-Assessment Workshop

The Workshop will be presented by Roland Holland, MD, PhD, National Expert from the Training Centre for Breast Cancer Screening, Radboud University Medical Center, Nijmegen, the Netherlands and by Ulrich Bick, MD, Department of Radiology, CCM, Charité - Universitätsmedizin Berlin.

The workshop is designed for Radiologists, radiology residents, technologists, and other healthcare professionals who wish to acquaint and train themselves in digital mammography reading. On completion of the programme participants should be more familiar with screening, reading and manipulating digital mammography cases; they will have assessed their reading skills to detect cancers in their early stage and to maintain a good balance between recall rate and detection rate.

The workshop will give participants the opportunity for direct hands-on experience and they can register for up to seven one-hour sessions. Each session will start with an introduction that includes the learning objectives of the workshop, the method of reading and self-assessment and instruction on how to use the system. Each participant will have 45 minutes to read the cases, assess their own number of false positives and false negatives and then discuss the cases with

the medical experts. Those taking part will be able to choose between a total of seven different modules, each one containing 30 selected screening mammography cases with a mix of biopsy proven positives and negatives. Each module is independent of the others; they do not need to be completed sequentially.

Online registration for the Workshops will be announced shortly.
